

KSL Furniture

Eco-Friendly Initiative

KSL Furniture is so committed to protecting our environment, that we have developed a green, eco-friendly initiative. While sourcing and selecting material for our products, this environmental initiative is always at the forefront of our decision making process.

Foam

KSL uses polyurethane foam that is fully cured and 100% inert, using low to no VOC chemistry. We will refuse to use foam that is not classed as Low VOC. All of the foam we use, is PBDE-free.

We also have soy-based bio foam available for certain grades of foam. This bio-foam utilizes 60% less petrochemicals in its manufacturing. We are already using this in 50% of our production – mainly in cushion cores. When requested, KSL will be sure to use this soy-based bio-foam.

Frames

Our frames are constructed with a combination of raw lumber and engineered panels. The raw lumber is forested by strict Canadian government guidelines, which means that a reforestation plan must be in place, and financed, before logging can commence on any land.

The engineered panels that we use, are made from fibers collected from previously termed waste lumber. This lumber is then engineered into structural panels with the use of phenolic glue that does not contain Volatile Organic Compounds (VOCs) such as formaldehyde.

Fabric

KSL has 2 different classes of environmentally friendly fabrics available:

Organic

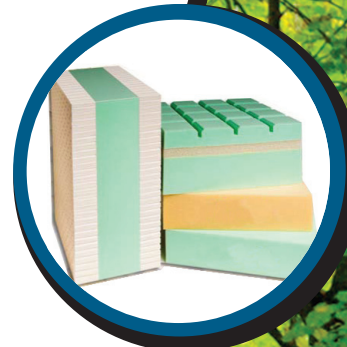

- **Eco-Reed**
- 79% Cotton / 21% Bamboo
- 100% Natural Fibers
- Sustainable / Replenishable Fibers
- No chemicals used in Finishing
- Dyes certified to meet global organic textiles standard (GOTS)

Eco2Cotton

- **Patterns include: Flourish, Logan, Maya, Saturn and Utopia**
- Made from regenerated cotton yarns and fibers
- Reduces incinerator and landfill use by reprocessing pre-consumer textile waste
- No land use, no water intensive irrigation, no fertilizers or pesticides as are used in growing new cotton
- Cotton fibers require no new dyeing, saving water and adding no new pollutants
- Simplified manufacturing process reduces energy and resources use

Glues, Stains and Finishes

KSL uses non-toxic inert glues, stains and finishes that are considered low in VOCs. We use water-based compounds where possible.
